SUMMARY

Full-stack developer with a front-end focus (React, TypeScript, Next.js, PostgreSQL). About five years of self-directed learning and project building. Architecture-trained, so I bring a strong sense of structure, space, and design to the interfaces I build. Looking for a front-end or full-stack role, remote or on-site.

PROJECTS

Verb Conjugator v2

Live demo · Source

Next.js, TypeScript, PostgreSQL, Tailwind CSS, Vitest

- Full-stack app to search English verbs by any form or by Spanish translation, with user accounts and role-based permissions.
- Own authentication: bcrypt hashing, signed JWT in httpOnly cookies, and permissions enforced on the server.
- Ranked search with trigram indexes; debounced, cancellable requests.
- Automated tests and CI on GitHub Actions; deployed on Vercel and Neon.

Verb Conjugator v1

Live demo · Source

React, TypeScript, FastAPI, PostgreSQL

- Original version: REST API with FastAPI and PostgreSQL, React and TypeScript interface with search, light/dark theme, and CRUD.

Anti-Ratas

Python, Node.js, GitHub REST API

- CLI tool, implemented in Python and Node.js, that finds accounts that don't follow you back using the GitHub API; includes dry-run mode, whitelist, and history log.

SKILLS

Front-end: React, TypeScript, Next.js, Tailwind CSS, Three.js
Back-end: FastAPI, Express, Node.js, REST APIs, JWT authentication
Databases: PostgreSQL, MongoDB
Tools: Git, GitHub Actions, Vitest, Vercel, Neon
Languages: Spanish (native), English (B2)

EDUCATION

Architecture studies, Universidad del Bío-Bío | 2017–2023 | All coursework completed
